*Reliable*

*Dedicated*

*Responsive*

## *Service, repair and replacement of automatic doors*

KONE Building Doors, one of world's largest door service companies, proudly introduces the KONE UniDrive™ automatic door solution for the replacement and modernisation of pedestrian sliding door operators.

In the past, replacing or upgrading an operator would normally involve the complete removal of the previous operating system, structural modifications and cause significant disruption to a store or facility during the installation.

### *One Solution for all Operators*

The innovative design of the KONE UniDrive™ system means that the replacement operator uses much of the existing platform of the previous system. This provides the client with a state of the art, quality operator with minimal inconvenience. The unique flexibility of the KONE UniDrive™ means that an existing operator, no matter its brand, model or age, can be replaced quickly and efficiently.

### *Greater Safety and Less Disruption*

The ability to provide a solution quickly improves client security and staff safety. Due to the compact and modular design of the KONE UniDrive™, operators can be quickly replaced with minimal disruption to the store's people flow and entry points.

### *Flexibility and Simplification*

For clients with more than one operator or who face the complexity of multiple brands of equipment, the KONE UniDrive™ provides the ability to standardise operators. Furthermore, UniDrive's flexibility means that pricing of replacement operators and procedures can be agreed in advance without the need to know any details of the door that will be replaced. For organisations with large portfolios of equipment, this simplification will help with forward planning and capital budgeting.

### *KONE – The Total Solution*

The KONE UniDrive™ offers a solution that is quick, simple, cost effective, safe and fully supported by a company of global stature. KONE's unparalleled network and response times means that wherever the operator is located in Australia, no matter what time of the day, KONE Building Doors will provide the right solution for your automatic doors.

## KONE UniDrive™ benefits

Features	Benefits
Modular Design	The compact design, complete with sealed gearbox and motor, is flexible and adaptable to all existing platforms
Belt Drive	The belt driven technology allows for a quiet and smooth operation without the need to lubricate or replace a stretched transmission chain
Sealed Encoder	The encoder is sealed, reducing the ingress of dust and moisture, improving reliability and reducing maintenance
Self-Testing Ability	The continuous self testing of batteries and photo-electric beams means improved public safety
User Programmable	No longer are clients required to call the service provider to modify the operating characteristics of the door to meet their changing needs. Simple dip switch controls are incorporated eliminating the need for specialised proprietary hand controllers
Onboard Counter	The onboard counter provides an understanding of the doors workload and history. This customer traffic data allows the client to maximise the efficiency of their entry points and floor layouts.
Australian Standards	The KONE UniDrive™ is fully compliant with Australian Standards and Building Codes
