

DOOR OPERATOR MAINTENANCE AND MODERNISATION SOLUTION

# KONE UniDrive® Retrofit

**Key benefits:**

- Ensures that your door complies with the latest safety, durability and efficiency standards
- Suitable for all types of sliding doors
- Plug-and-play installation decreases door downtime
- No modifications needed to existing sliding doors
- Small size - can fit the smallest of operators
- Modular setup allowing many configurations
- Highly adjustable to meet each specific requirement
- Based on over 35 years of experience in door electronics

The KONE UniDrive® Retrofit is a universal solution for upgrading the control element of automatic sliding doors. It decreases downtime by enabling you to replace the mechanical and electrical components without changing the construction of the existing door.

**The universal solution**

The KONE UniDrive® Retrofit is developed especially for upgrading and repairing the control element of your automatic sliding door. This unique product is a universal solution capable of controlling other manufacturer's door operators, as well. It enables full replacement of the mechanical and electrical parts of the door with new KONE parts. With this modernisation we can ensure that your door complies with the latest safety, durability and efficiency standards, without making any changes to the construction of the door.

In some cases it is necessary to replace all of the mechanical and electrical parts of the door. The KONE UniDrive® Retrofit solution can be used without changing the appearance of your existing operator and doors. We can, of course, supply new door panels and door headers too, if these also need to be upgraded.

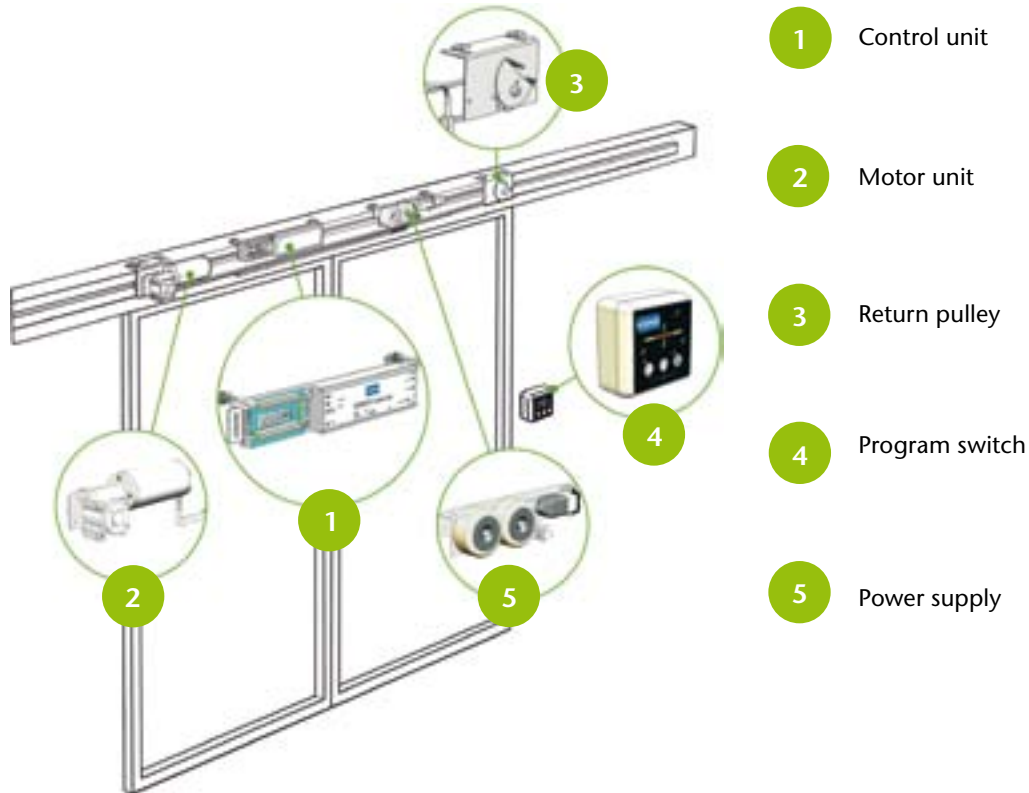

**An intelligent door operator**

The KONE UniDrive® operator meets and exceeds the highest standards regarding safety, durability and flexibility. It allows the door's operation to be highly customised from the most basic operational settings to the most advanced. The advanced intelligent door operator can collect and store information and act accordingly. The operator software includes self-diagnostic capabilities, so the door is easy to maintain, adjust and repair. The door operator is also equipped with safety features such as reverse opening if an obstruction is in the way of the opening or closing cycle.

*Thanks to plug-and-play installation, the KONE UniDrive® Retrofit can be installed quickly, with little downtime and no modifications needed to the existing door.*

## UniDrive door operator key components

### Quality and service

When you choose KONE products, you get the highest standards in quality, safety, design and durability. KONE door solutions are based on quality materials and expertise achieved during 35 years of experience. These doors meet international standards, for example CE-standards and ISO 9001:2000 certificates, and are TÜV approved. KONE also offers a complete service and maintenance programme for the needs of your business.

In order to minimise downtime, all spare parts needed to maintain KONE solutions are available from our web-store and will be dispatched to any maintenance provider, usually within 24 hrs.

KONE doors business operations and products are certified for the ISO 9001 quality management system and ISO 14001 environmental management system.

*In order to keep your doors operating reliably, KONE offers a complete service and maintenance programme, backed by 1200 highly-trained maintenance engineers.*
