

## KONE RENOVA

# Door Modernisation

**The value of a good first impression**

The door is the first thing people see when they enter the elevator and the last thing they see when they leave.

The appearance of new doors improves the passenger experience during the journey. New automatic KONE ReNova™ doors operate smoothly and quietly to give people a sense of safety and comfort when entering and leaving the elevator car and during the ride.

KONE modular door solutions cover the whole range of elevators from low-rise residential buildings to high-rise office blocks. Existing elevators can be modernised by upgrading the car door system, the landing door system, or both. Door modernisation can range from replacing only the car door operator and associated mechanical parts, to a partial mix-and-match solution, to complete car and landing door modernisation. Based on elevator usage and the performance required, the solution can be tailored to ensure the ideal performance level. The KONE modular door solution can be combined with other KONE modular modernisation solutions, such as electrification and signalisation to create the most suitable modernisation.

**KEY BENEFITS**

- Complete modernisation package for elevator doors

**Safe**

- Safety is a priority of the door operation at all times. Working through the controller, the door sensors prioritise the safety of passengers, continually protecting them from being struck by closing doors
- Complies with EN81-80 (European Safety Standard)

**Reliable**

- KONE's replacement doors are identical to those found in KONE's market leading new elevators and benefit from the same high quality of build and reliability

**Stylish**

- In modern buildings, appearance plays a vital role ensuring the environment looks bright and fresh. To help achieve this KONE replacement doors can be supplied with a choice of stainless steel or coated metal finishes

**KONE ReNova™ 200/600/800****- for modernising existing automatic doors**

The KONE ReNova™ 200/600/800 series is for modernising existing automatic doors. KONE ReNova™ technology that increases passengers' safety and peace of mind. KONE's modular modernisation extends to the parts of the doors: the drive and car railing, car door, landing railing and landing door. So you can modernise only the parts that need replacement, keeping your elevator in top condition and keeping costs under control.

# A range of solutions for every requirement

|                   | KONE ReNova™ 200  | KONE ReNova™ 600  | KONE ReNova™ 800  |
