

Custom High Rise Roof Scuttle Door

Project Requirements

- Replace existing 8th floor roof scuttle door.
- Provide a new door that meets occasional large dimension needs and provides easy human access.
- Accommodate the building's daily operations in regards to access and timing issues.
- All demo and new materials must be moved through the elevator and then hand carried to and from the 7th floor.

Door Systems' Solutions

- Design and fabricate removable mullion 1/3-2/3 scuttle. This allows human door operation or complete access to move equipment in and out.
- Provide longer hardware life due to smaller man door operation.
- Provide a single day of turnkey demo and installation.
- Complete the project the same day allowing for the morning and afternoon rush hours to be uninterrupted.
