

KONE LED LIGHT RETROFIT

One hour's work
that saves money
for years.

Replacing halogen lights is the biggest single reason for service calls, since they have to be replaced every 3 months. LED lights last 12 times longer than halogen lights – up to 50,000 hours, or 6 to 10 years, depending on usage. So there are fewer service calls, and your elevator is safer – because the lights are more reliable.

LED lights are a KONE Eco-efficient™ solution that makes your elevators more economical.

LED lights last longer

Up to 35% of the cost of running an elevator is related to lighting. LED lamps reduce energy consumption by 80% compared with halogen lights. This amounts to savings of 560 kWh/year for each elevator. New LED lamps take an hour or less to install – and they keep saving money for years.

How to save 560 kWh a year

LED LIGHTS IN BRIEF

Take an hour or less to install

Use 80% less energy than halogen lights

Don't have to be replaced so often

Ensure proper level of lighting
