Intelligent People Flow® solutions for airports

When people travel by air, the journey – and therefore the user experience – begins a long way before they step on board the plane. It covers parking halls, main entrances, check-in and security zones, as well as shopping facilities & departure gates. Just as in any other building, people flow and goods flow do not just happen – it’s the result of careful planning and in-depth analysis. Understanding how passengers and goods move around airports is vital to delivering a great experience

TYPICAL FLOW

REFERENCES

LHR, LONDON, UK

Daqing airport is capable of accommodating 45 million passengers by 2021 and 100 million with planned expansions. The efficient radial structure aims to allow passengers to reach the flight gates from entering the building in 30 minutes maximum, and from the building's central core in 8 minutes.

ABOUT KONE

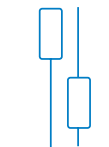

KONE provides innovative and eco-efficient solutions for elevators, escalators and autowalks, automatic building doors and the systems that integrate them with today's intelligent buildings. Our mission is to improve the flow of urban life and together with our partners and customers around the world, we help to address the needs of the people who use airports, transport hubs, and metro stations. Our equipment, maintenance, and modernization solutions add value to buildings throughout their life cycle.
